## PERSONAL PROJECTS

### •Codex - The coding quiz app

*Quiz app build in Java with question based on 8 different technology domains.*

Dec 22 - Jan 2023

- Tools & technologies used: Java, Android Studio, Firebase Authentication

### •MyMeal - Food Delivery App

*Build a food delivery app using Java programming language.*

Feb - March 2023

- Tools & technologies used: Java, Android Studio, Firebase Authentication, Firestore

- Using this app user can order food from nearby restaurants. Not being a fully developed, this app is still not capable of ordering and delivering the food in real. This just follows the dummy procedure till the order is placed.

### •Weather Forecast App

*Build a weather forecast app using Flutter and Dart programming language.*

Feb - March 2023

- Tools & technologies used: Flutter, Dart, Android Studio, Firebase authentication

- Weather forecast app created using Flutter, a cross-platform UI toolkit. This app fetches the live weather data with help of OpenWeather API.

### •Personal Portfolio Website

*Build a personal portfolio website for displaying my projects and social media profiles.*

Feb - March 2023

- Tools & technologies used: Html, Css, Vs Code, GitHub Pages

- This webpage contains my CV, skills, about me, project illustrations and contact me sections.
